data technologies

▸ The 2.1.3.3+ Release Incorporates and New Driver Technology for Windows, Linux and Solaris Call a "Plug-In." This greatly enhances interrupt and multi process (one process per channel/device) support and reduces interrupt latencies.

  ◦ This new Plug-In Requires the Old AltaDT Driver to be Removed from the Windows Machine.

  ◦ This is a simple process through Device Manager->Hardware Tab. See Next Slide.

Device Manager Can Be Found By Right-Clicking on My Computer on the DeskTop or in the Control Panel->System

Uninstall ONLY the AltaDT driver. Other Jungo/Alta Card Drivers Do Not Matter.

- From **Control Panel->Add/Remove Software**, REMOVE the "Alta Software." This will NOT remove your custom files – it will only remove (uninstall) old Alta Software files.

- Download and UnZip Alta 2-2-X-X.zip to a Local Folder. Run the "setup.exe" file to load 2.2.X-X. This may take several minutes to start installation – be patient.

- Click through the Next Buttons and Install Software.

- Reboot Your Computer to Activate New Driver.
